Example 12 Digit Random Weight Barcode

~   2 1 7 2 3 4   6   7 5 9 8   4

Must start with tilde ─────
Product number ─────
Price check digit ─────
Price ─────
Check code digit ─────
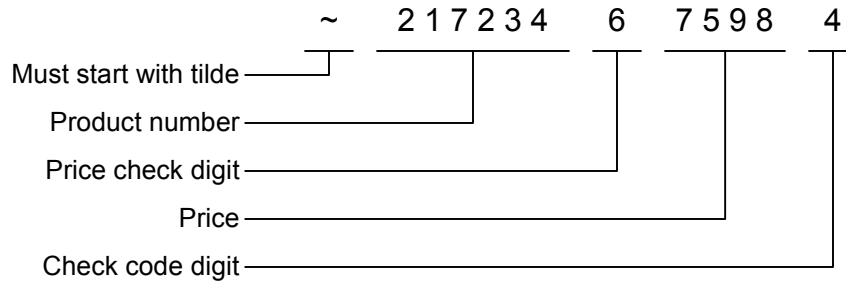

Programming options: (POS System Options -> Misc)

1. Five Digit Price (checkbox)
   If checked, in the above example the price would include the last '4' which would result in a price of 759.84   If not checked, the price would be 75.98

2. Leading Zero (checkbox)
   If checked, a zero must appear immediately after the tilde and before the '2', resulting in a 13 digit barcode. This zero is discarded before parsing the barcode. If not checked, then a '2' must immediately follow the tilde resulting in a 12 digit barcode as shown in the above example.

Rules:

 1. Barcode must have a leading tilde, followed by 12 or 13 digits.

 2. Product number must start with a '2'.

 3. List file number is 99999.
